

PRESS RELEASE

Schiphol Amsterdam Airport, July 7th, 2008

AMOS LIVE AT NAYAK AIRCRAFT SERVICE NETHERLANDS B.V.

On June 29th, 2008 around midnight the AMOS system was successfully implemented and went live at Nayak Aircraft Services at Schiphol Amsterdam Airport.

It was November 2007 when Management of **NAYAK Aircraft Service Netherlands B.V.** and **Swiss Aviation Software** agreed to start the implementation of AMOS as leading Maintenance Management system.

Under the inspiring leadership of AMOS Supervisor **Sander de Bree** of Nayak Aircraft Services and thanks to an enthusiastic team of key users the organization was prepared and the system implemented in a period of 5 months only. Normally this operation takes one to two years instead!

What made this operation extra complicated was that for the first time ever Swiss-AS had to split the original full integrated AMOS database in order to process the data concerning the Fokker 70 and 100 for Nayak Aircraft Services, and leave out all data regarding other type of aircraft belonging to Martinair.

Cooperating with employees of KLM Cityhopper, Martinair and Swiss Aviation Software, the team of Nayak Aircraft Services spent the few days before going live with testing and programming of all data for many hours per day with most satisfying results.

Bernd Prestel & Sander de Bree

Bernd Prestel of Swiss Aviation Software: "AMOS requires a total quality management to simplify the introduction. Thanks to the lean organization of Nayak Aircraft Services where every person is used to take his or her responsibility this process was managed in 5 months only. Besides that both Managing Directors were visible throughout the process, what made decision-making a lot quicker. All this really made my life easier!"

In the coming period of time more information needs to be processed in order to update the system. In time the organization will notice all benefits of a full integrated system.

ABOUT AMOS / Swiss Aviation Software

Swiss-AS is committed to premium quality regarding the further development of its state-of-the-art MRO software solution AMOS. The fully integrated maintenance management system AMOS is marketed on an international level and is actively used by about 60 airlines/MRO providers world-wide.
